

Description for Project:

1. A Hair salon website which allows users to see services & prices of the salon, book appointments, see availability times, and find address and opening times.
2. The interface has 4 sections: a homepage that showing the overview of the hair salon, service page that showing services and prices according to stylist, booking page that providing users a way to book an appointment, a contact page that showing opening hours and address. Every page has a navigation bar on the top which indicates where users are and gives a way for users to go to other pages.
3. Our main functionality will be booking appointments. On client side, users will be able to choose date, time, and stylists that provided by server they also will have to enter their email, name, and phone number to sign up or booking. On server side, there will be a database of available times, stylists and their providing services. Server will provide available time slots to user.
4. For available times and dates, client side will not need to block wait for response of available time then send dates. Client side will send them all and wait for asynchronized response.
